FIRE SPRINKLERS

Free lunch, free seminar, and possibly free fire protection...

The Homesafe Group is delighted to offer free training to your staff in-house at your own offices
“**Designing for the Next Generation: An Introduction to Residential and Domestic Fire Sprinklers**”
is a well received CPD seminar, accredited by the Royal Institute of British Architects.

In addition to the obvious life saving benefits associated with fire sprinklered buildings, less well known, but very substantial, **financial savings** can be achieved - **if you are well informed.**

Homesafe has been running **free training events** such as these for several years. As a result, architects are designing and developers are building better, safer houses and apartments. **Often, occupants are protected by sprinklers at no additional cost to the project.**

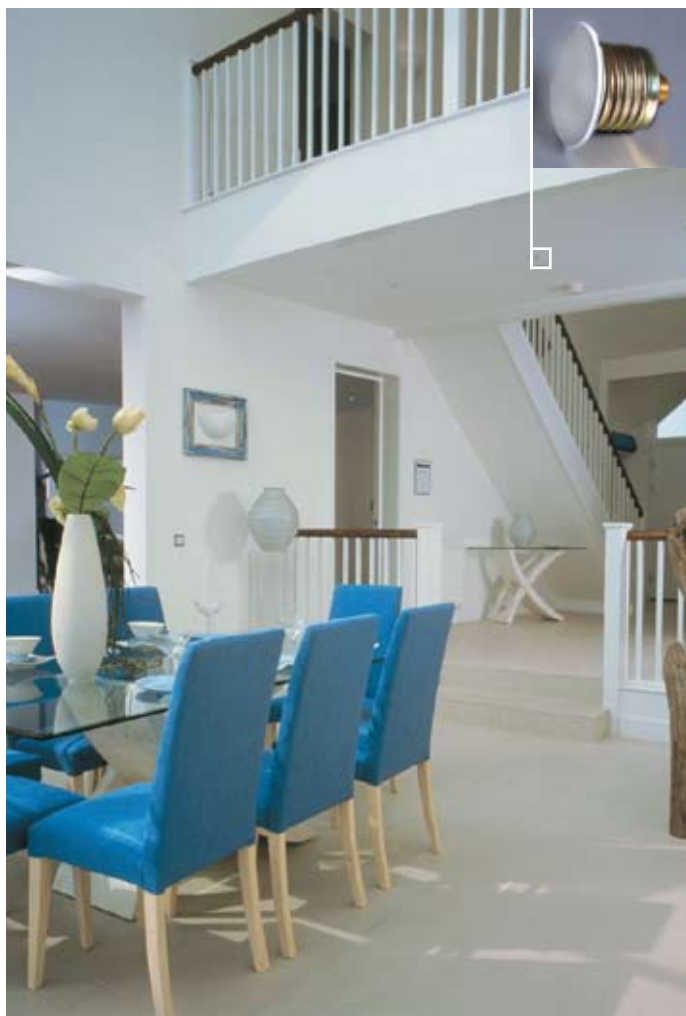

Our Commitment

Our event, which is accredited by the Royal Institute of British Architects (RIBA) for CPD training points, will last no more than one and a half hours.

The seminar has been assessed and forms part of the RIBA CPD core curriculum.

We will deliver a high quality seminar in which delegates will learn the benefits of incorporating sprinklers into the design of a building. Delegates will also be issued with an informative reference guide, and, where required, a CPD training certificate.

Unobtrusive & Aesthetically pleasing. Moreover, sprinklers enable open plan design suited to modern living

Your Commitment

Number of Delegates

Organisations who book a Homesafe CPD seminar need to ensure that the event is promoted internally and that we have a minimum of 10 delegates attend. (For smaller organisations, we will try to arrange an invitation to an open-house seminar within your region).

Time

For the event to take place, we acknowledge that your staff are giving up their own time to attend, and that some of the seminar will encroach on productive office time, too. The best training is lively and interactive, therefore we need you to commit your delegates for at least one and a quarter hours. It will be worth it.

Venue

We need space within your offices suitable for the numbers attending, and a space for our projector. If you have a screen, that's great, but a white wall would do.

Arrange the lunch

It works best when you arrange a suitable light lunch for your delegates whilst we train, for which you will be re-imbursed by Homesafe. (Send us the bill!)

Top: Peace of mind for vulnerable occupants and those with a duty of care. Sprinklers aid the achievement of inclusive design and independent living

We have a duty to safeguard future generations by applying what we know to how we build

From protecting those unable to help themselves to achieving the "wow" factor of contemporary living

Who would benefit from a seminar?

- Architects
- Building Control Officers
- Care Home Managers and Owners
- Developers
- Environmental Health Officers
- Fire Engineers
- Housing Associations
- Mechanical & Electrical Consultants
- Private & Public Landlords
- Quantity Surveyors
- Those with a duty of care for vulnerable occupants

The seminar aims to advise on the technological advances in fire sprinkler systems for residential and domestic property, particularly with regard to ongoing maintenance issues and assured water supply.

In addition, we are able to explain how such systems can be engineered into buildings to give equivalent, and, in fact, better, protection than other means of complying with Approved Document B.

Seminar topics

Our seminars are usually lively affairs and delegates find them extremely informative. They cover:

- An introduction to Residential Fire Sprinkler systems
- Sprinkler Standards
- Water Issues
- System Options
- Design Benefits
- Sustainable Development
- Approved Document B
- Cost benefit analysis

If you are interested in booking a seminar, please fax back the booking form as soon as possible.

Informative reference guide and CPD training certificate

A second means to an end. Need a second means of escape?
There is another way with fire engineered design

“The government and fire community do much to educate people to the dangers of fire in the home, where we sleep, work and in places where we resort. In the UK, Building Regulations provide functional requirements to confine fire spread. However, containing fire in a compartment is time dependent and will not confine a fire indefinitely, nor does it provide for the safety of the people, the contents or the fabric in that compartment.”

The National Fire Sprinkler Network

Booking form

We have a busy CPD programme across the country. In order for us to arrange seminars efficiently it would be helpful for you to indicate the anticipated number of attendees. (Ideally, we prefer to deliver in-house seminars to at least 10 delegates, although this is often far exceeded.)

Yes please, we are interested in booking a Homesafe CPD seminar.

We anticipate having ___ delegates. Please contact me to make the arrangements

Name Job Title Organisation

We are interested in a Homesafe CPD seminar, but we may not be able to muster up so many delegates.

Please advise me of open seminars in my region.
